

eClinic By Interswitch

Smarter healthcare. Connected systems. Better outcomes.

About eClinic

eClinic is a digital health platform built to make healthcare simpler for everyone.

It helps hospitals, clinics, and government health agencies move from paper files to clean, connected systems that actually make work easier.

With eClinic, everything comes together in one place: patient records, billing, payments, reporting, and data tracking.

That means less paperwork, smoother operations, and better care for every patient.

And through Smarthealth, a part of the eClinic ecosystem, these benefits extend from hospital dashboards to the everyday user.

Smarthealth connects individuals to doctors for virtual consultations, helps them monitor wellness, and gives hospitals and HMOs a simple, secure bridge to reach their patients remotely.

eClinic powers the system. Smarthealth connects the people. Together, they make healthcare truly connected — from clinic to cloud to consumer.

Our Mission

To make quality healthcare easier to access through technology that connects doctors, patients, and health systems.

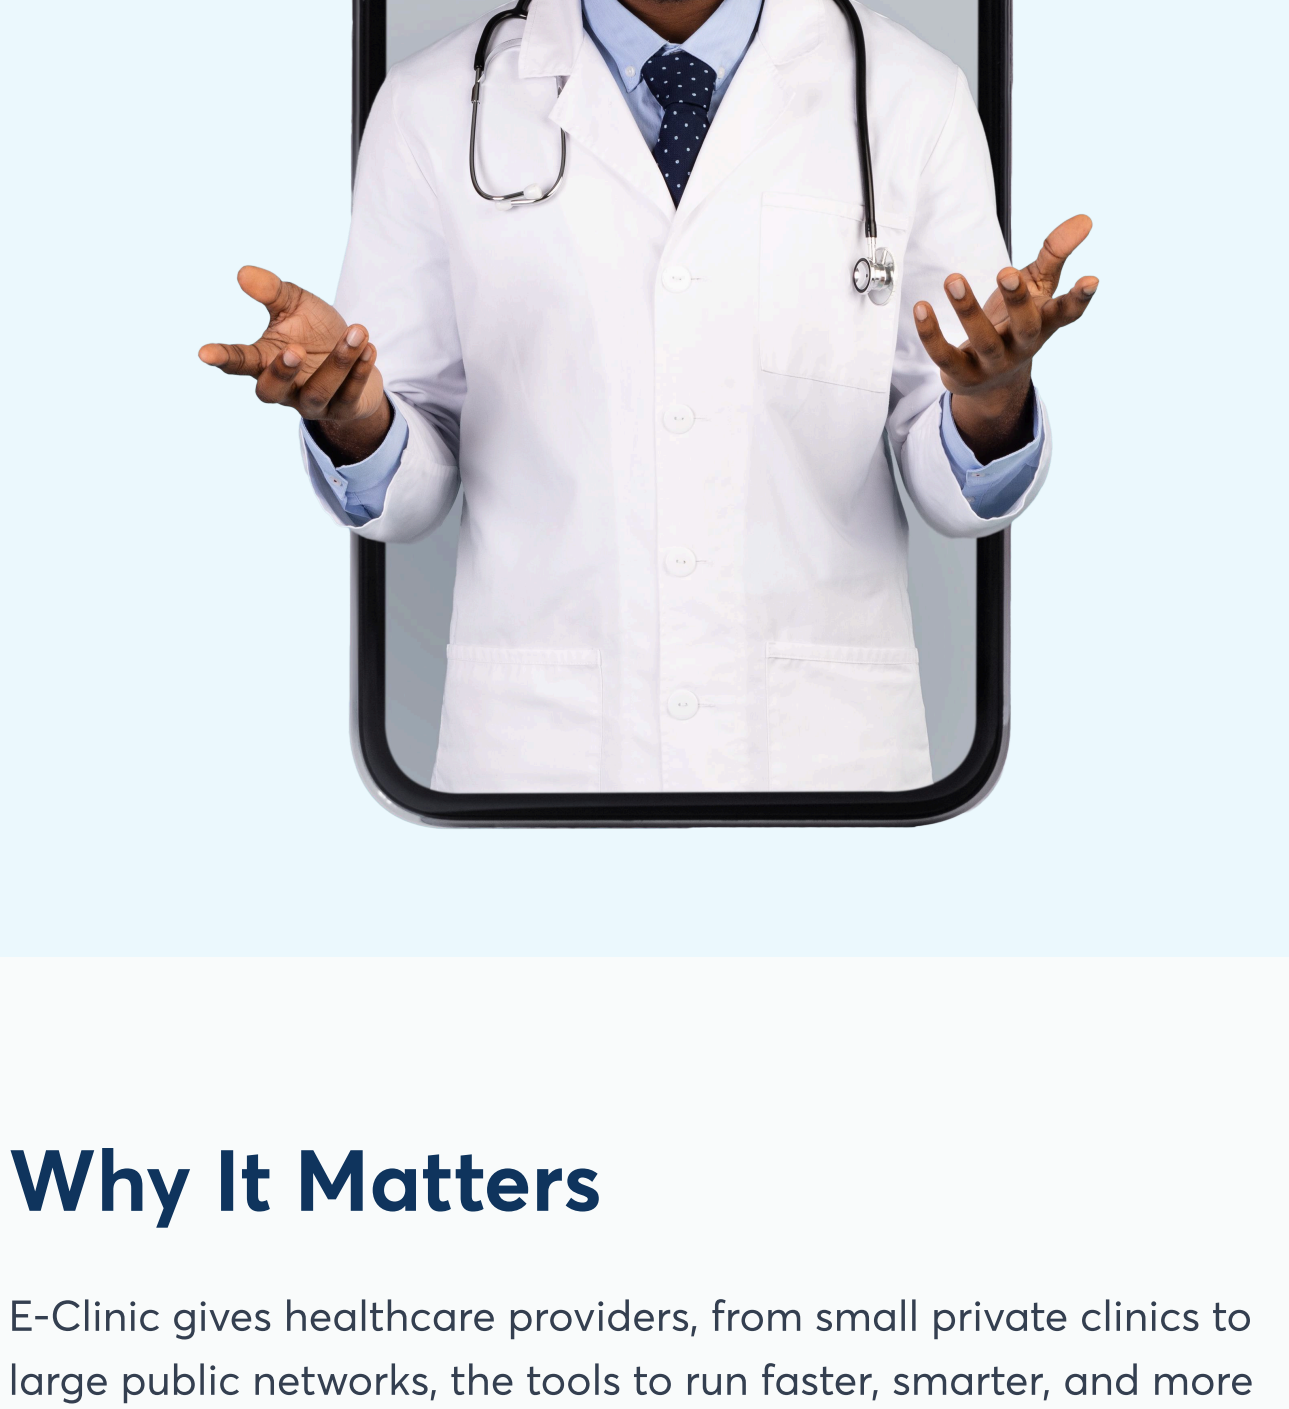

Our Vision

To become Africa's most trusted platform for digital healthcare — one that connects institutions, professionals, and individuals through the eClinic and Smarthealth ecosystem.

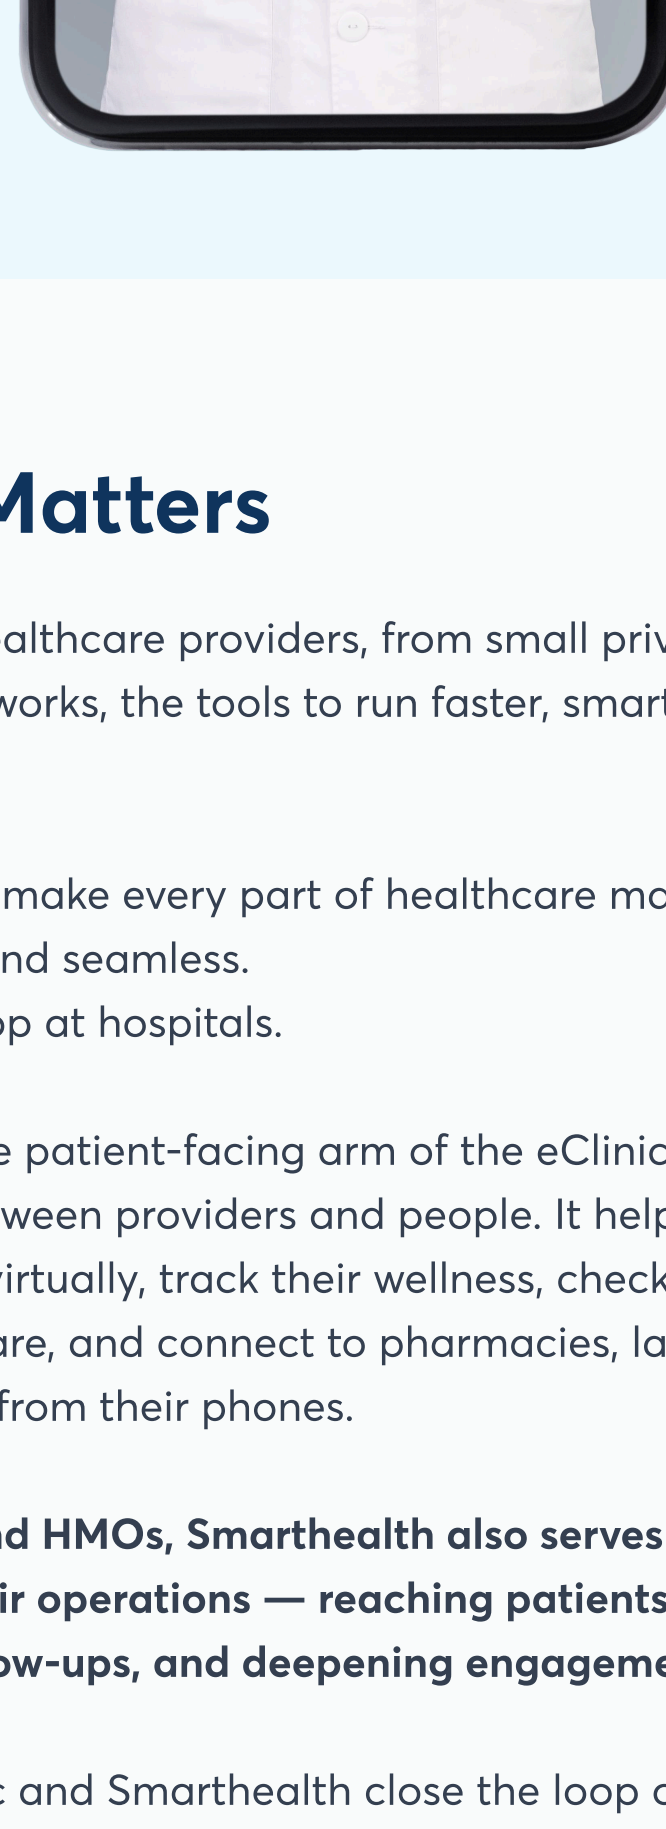

What eClinic Can Do

- 1 Register patients and store records digitally
- 2 Manage consultations and patient queues
- 3 Handle billing, payments, and revenue tracking
- 4 Give real-time data visibility across multiple facilities
- 5 Store records securely on the cloud
- 6 Integrate with insurance systems and public health databases

Through Smarthealth:

- 1 Enable remote consultations and patient follow-up
- 2 Provide a secure mobile interface for individual health management
- 3 Facilitate hospital-patient engagement beyond the facility walls

Why It Matters

E-Clinic gives healthcare providers, from small private clinics to large public networks, the tools to run faster, smarter, and more transparently.

It is designed to make every part of healthcare management simple, secure, and seamless.

But it doesn't stop at hospitals.

Smarthealth, the patient-facing arm of the eClinic ecosystem, bridges care between providers and people. It helps individuals access doctors virtually, track their wellness, check symptoms, locate nearby care, and connect to pharmacies, labs, and insurance — all from their phones.

For providers and HMOs, Smarthealth also serves as a digital extension of their operations — reaching patients remotely, automating follow-ups, and deepening engagement.

Together, eClinic and Smarthealth close the loop on care, connecting systems and people into one intelligent network.

Our Impact So Far

- Digitized operations for several healthcare networks in Nigeria
- Improved reporting accuracy by up to 80%
- Reduced administrative costs and patient wait times
- Enabled thousands of individuals to access care remotely through Smarthealth
